Claim Objections

1. Claim 12 is objected to because of the following informalities: In claim 12, the line after the formulae, it states "(la), (lb), and (lc) below", whereas the formulae appear above the line. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-4, 9-11 and 13-19 rejected under 35 U.S.C. 102(a) as being clearly anticipated by WO 01/60811.

See compounds 37, 38 and 39 on pages 71-72 and compound of formula (I) on page 106.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-4, 9-11 and 13-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Melzig (US 6,146,554).

Art Unit: 1712

Melzig teaches photochromic naphthopyran compounds of formula (I) in which two groups of R1 may form a ring selected from pyridine, pyrazine, pyrimidine, furan or thiophene (see claim 1). Melzig differs from the present invention in that a specific example of the naphthopyran containing such ring structure is not disclosed. However, it would be obvious to one of ordinary skill in the art to make naphthopyran compounds of formula (I) in which two groups of R1 may form a ring selected from pyridine, pyrazine, pyrimidine, furan or thiophene, given the teaching of Melzig that such compounds are useful in the formation of photochromic products, particularly in view of the superior brightening, darkening and migration properties (see abstract).

6. Claims 5-8, 12 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
